52. A reflecting coupler comprising a body having an aperture extending therethrough from a first side to a second side, wherein an interior surface of the aperture is reflective, wherein a first portion of the interior reflective surface conforms to a two-dimensional (2-D) surface and a second portion of the interior reflective surface conforms to a three-dimensional (3-D) surface, wherein the 2-D surface extends at least partially between the first and second sides of the body, wherein the first portion is disposed proximate the first side of the body and the second portion is disposed proximate the second side of the body, and further wherein the reflective surface conforms substantially to four aspherically cylindrical surfaces proximate the first side and a surface of revolution proximate the second side.
